

Biotech & Biomedical Facilities Management

The Principals, Professional and Engineering Staffs at Egis Facility Services have a wealth of experience in biomedical facilities management and sophisticated plant operations.

Our backgrounds include facility development, leasing, management, construction oversight, equipment service and vendor coordination.

Over the past 22 years, we have worked with a broad spectrum of biomedical and biotech companies including medical device and pharmaceutical manufacturers, fledgling start up entities and major corporations engaged in bringing new products to market through exacting clinical trial periods.

Egis' services support the efforts of companies engaged at the leading edges of scientific exploration. We understand the great investment companies make in research initiatives and the no-fail atmosphere in which their buildings must operate.

We take a holistic approach to facility management and foster working alliances with facilities directors, laboratory managers, research and production personnel by providing responsive and attentive care to the particular needs of tenants in these critical properties.

Egis' fully licensed engineering teams are factory-trained to service and maintain cooling towers, chillers, deionized water systems, boilers, sophisticated air handlers and filtered clean room systems.

For an in-depth presentation of our comprehensive facility management, and engineering capabilities, please call us at 206-404-4357.
